## 1 Aim

This document represents a summary of literature data to ontogeny of enzymes, and other ADME relevant proteins as well as fit results used for implementation of ontogeny functions in PK-Sim®.

## 2 Data management

### 2.1 Literature data

Used literature data are referenced in the respective enzyme sections.

### 2.2 Fit results

Fit results and figures are illustrated in the respective enzyme sections.

## 3 Methods

A maturation model based on a sigmoidal Emax model (corresponding to the Hill-equation), published by Tod et al. 2008 (Clin Pharmacokinet. 47(4):231-43) presents the best description of age dependent development of e.g. proteins (Fig. 1). This model was also presented at the EMEA Workshop on Modelling in Paediatric Medicines in 2008 (Presentation 'Prof. N. Holford, 2008, 'Mechanism-Based Concepts of Size and Maturity', [www.ema.europa.eu/docs/en\\_GB/document\\_library/Agenda/2009/11/WC500010017.pdf](http://www.ema.europa.eu/docs/en_GB/document_library/Agenda/2009/11/WC500010017.pdf)).

**Figure 1.** Slide taken from  
'[http://www.ema.europa.eu/docs/en\\_GB/document\\_library/Presentation/2009/11/WC500009792.pdf](http://www.ema.europa.eu/docs/en_GB/document_library/Presentation/2009/11/WC500009792.pdf)'

### Maturation Models

©NHG Holford, 2008, all rights reserved.

Fitting of ontogeny data was therefore performed using the following Hill equation (Equation 1):

$$A = PMA^n / (PMA^n + A_{0.5}^n) \quad (1)$$

With:

PMA = Post-menstrual age in weeks

A = Relative activity at PMA

$A_{0.5}$  = PMA (in weeks) at 50 % activity compared to adult  
 $n$  = Hill coefficient

In the case of proteins showing decreased expression with increasing age, the following inverse fit function was applied (Equation 2):

$$A = 1 - PMA^n / (A_{0.5}^n + PMA^n) + \text{offset} \quad (2)$$

With offset = activity in adults

For fitting the ontogeny including variability, constituting variability in ontogeny as well as activity, a virtual population with 10000 individuals was created. Fitted were then the geometric mean and geometric standard deviation of the Hill coefficient (GeoSD  $n$ ), the geometric mean and geometric standard deviation of PMA at 50% activity compared to adult (GeoSD  $A_{0.5}$ ), and a geometric standard deviation as an activity variability factor (GeoSD adult).

All illustrated figures are shown in full age-length and a zoom-in version in the first period after birth. The presented tables are the implemented tables in PK-Sim, which are created from the fitted Hill equations.

## 4 Results

### 4.3 CYP Enzymes in the liver

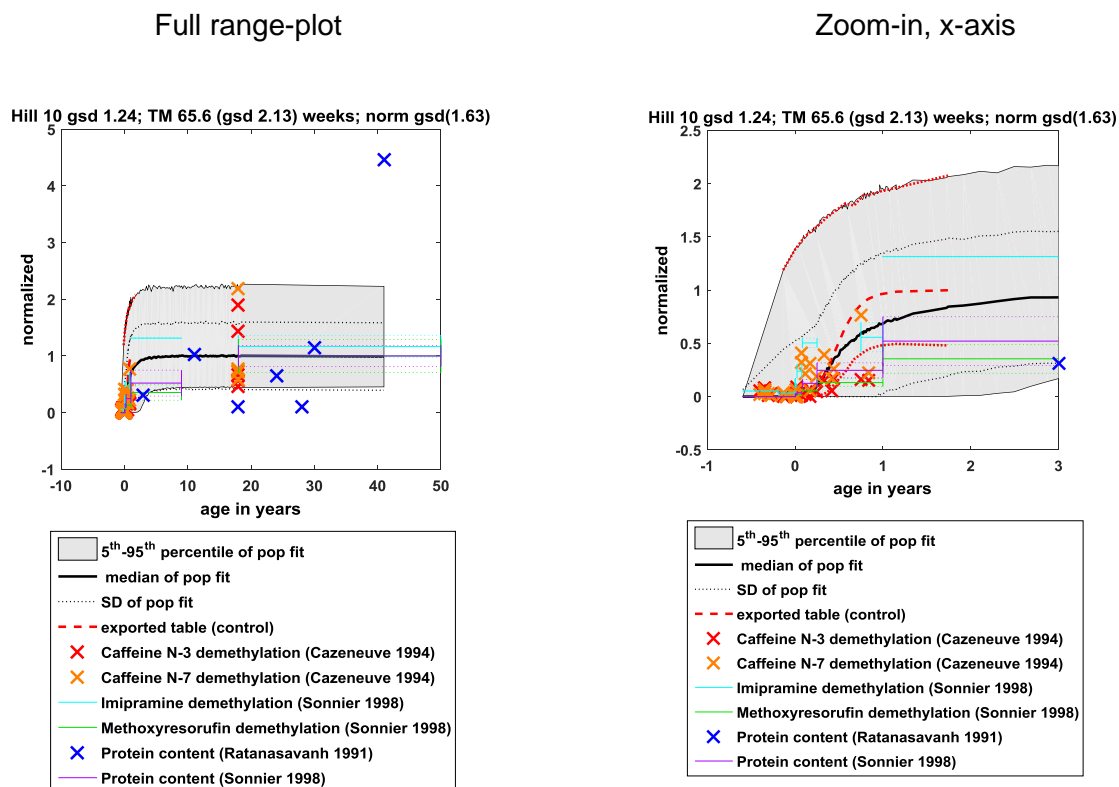

#### A.1 CYP1A2 in liver

##### A.1.1 Original data

Reference	Used for fit
Br J Clin Pharmacol. 1994 May;37(5):405-12.; Biotransformation of caffeine in human liver microsomes from fetuses, neonates, infants and adults.;Cazeneuve C, Pons G, Rey E, Treluyer JM, Cresteil T, Thiroux G, D'Athis P, Olive G.  Digital Object Identifier (DOI): 10.1111/j.1365-2125.1994.tb05706.x  → Table 2 (Caffeine N-3 demethylation, and Caffeine N-7 demethylation)	Yes
Eur J Biochem. 1998 Feb 1;251(3):893-8.; Delayed ontogenesis of CYP1A2 in the human liver.; Sonnier M, Cresteil T.  Digital Object Identifier (DOI): 10.1046/j.1432-1327.1998.2510893.x  → Figure 2a → Figure 2b → Figure 3	Yes Yes Yes
Hepatology. 1991 Jun;13(6):1142-51.; Intralobular distribution and quantitation of cytochrome P-450 enzymes in human liver as a function of age.; Ratanasavanh D1, Beaune P, Morel F, Flinois JP, Guengerich FP, Guillouzo A.  Digital Object Identifier (DOI): 10.1002/hep.1840130622  →Table 2 (protein content)	Yes

## A.1.2 Fit results

### A.1.2.1 Figure

### A.1.2.2 Fit function

$$A = \text{PMA}^n / (A_{0.5}^n + \text{PMA}^n)$$

With:

PMA = Post-menstrual age in weeks

A = Activity at PMA

$A_{0.5}$  = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

GeoSD adult = geometric standard deviation in activity observed in adults

#### Fit Result:

n = 10.015

$A_{0.5}$  = 65.639

GeoSD n = 1.241

GeoSD  $A_{0.5}$  = 2.130

GeoSD adult = 1.628

### A.1.2.3 Description for PK-Sim®

Values for CYP1A2 ontogeny are based on information to age dependency of Caffeine N-3 demethylation, Caffeine N-7 demethylation, Methoxyresorufin demethylation, Imipramine demethylation, and protein content, derived from the papers as mentioned in table A.1.1.

#### A.1.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for CYP1A2	Standard Deviation
0.629999995	0.00099	74.55000305
0.769999981	0.007	24.93000031

1.740000001	0.959999979	1.529999971
1.929999948	0.990000001	1.519999981
2.519999981	1	1.559999943

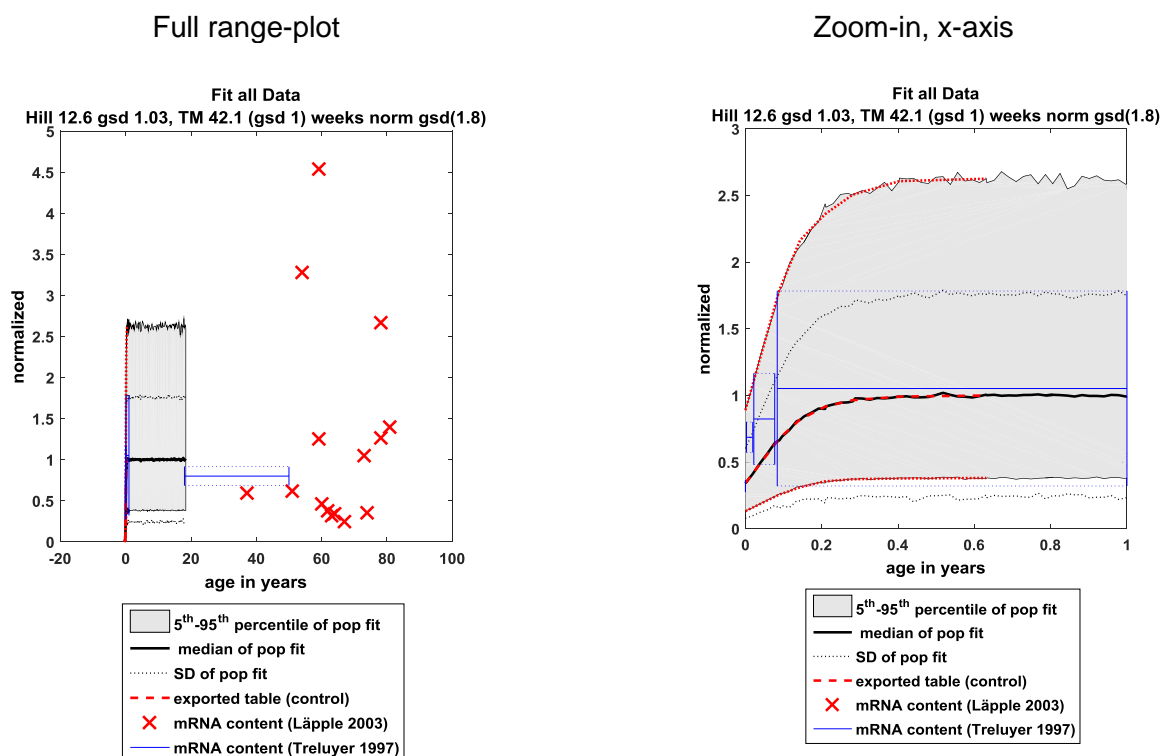

## A.2 CYP2C18 in liver

### A.2.1 Original data

Reference	Used for fit
<p>Pharmacogenetics. 1997 Dec;7(6):441-52.; Developmental expression of CYP2C and CYP2C-dependent activities in the human liver: in-vivo/in-vitro correlation and inducibility.; Treluyer JM, Gueret G, Cheron G, Sonnier M, Cresteil T.</p> <p>Pubmed ID (PMID): 9429229 (DOI not available)</p> <p>→ Figure 5 (mRNA expression)</p>	Yes
<p>Pharmacogenetics. 2003 Sep;13(9):565-75.; Differential expression and function of CYP2C isoforms in human intestine and liver.; Läpple F, von Richter O, Fromm MF, Richter T, Thon KP, Wisser H, Griese EU, Eichelbaum M, Kivistö KT.</p> <p>Digital Object Identifier (DOI): 10.1097/01.fpc.0000054122.14659.1e</p> <p>Pubmed ID (PMID): 12972955 (DOI not functioning)</p> <p>→Table 3 (mRNA expression)</p>	Yes

### A.2.2 Fit results

#### A.2.2.1 Figure

**Comment:** For the intestine, the geometric standard deviation in activity observed in adults ('GeoSD adult') has been separately fitted and implemented with a GeoSD of 2.177.

### A.2.2.2 Fit function

$$A = \text{PMA}^n / (A_{0.5}^n + \text{PMA}^n)$$

With:

PMA = Post-menstrual age in weeks

A = Activity at PMA

$A_{0.5}$  = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

GeoSD adult = geometric standard deviation in activity observed in adults

#### Fit Result:

n = 12.590

$A_{0.5}$  = 42.134

GeoSD n = 1.034

GeoSD  $A_{0.5}$  = 1.002

GeoSD adult = 1.795

### A.2.2.3 Description for PK-Sim®

Values for CYP2C18 ontogeny are based on information to age dependency of mRNA expression, derived from the papers as mentioned in table A.2.1.

### A.2.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for CYP2C18	Standard Deviation
0.469999999	0.00098	1.870000005
0.600000024	0.022	1.809999943
0.680000007	0.090999998	1.789999962
0.730000019	0.200000003	1.799999952
0.769999981	0.340000004	1.789999962
0.860000014	0.680000007	1.809999943
0.910000026	0.819999993	1.799999952
0.980000019	0.920000017	1.779999971
1.049999952	0.959999979	1.789999962
1.169999957	0.99000001	1.799999952
1.399999976	1	1.799999952

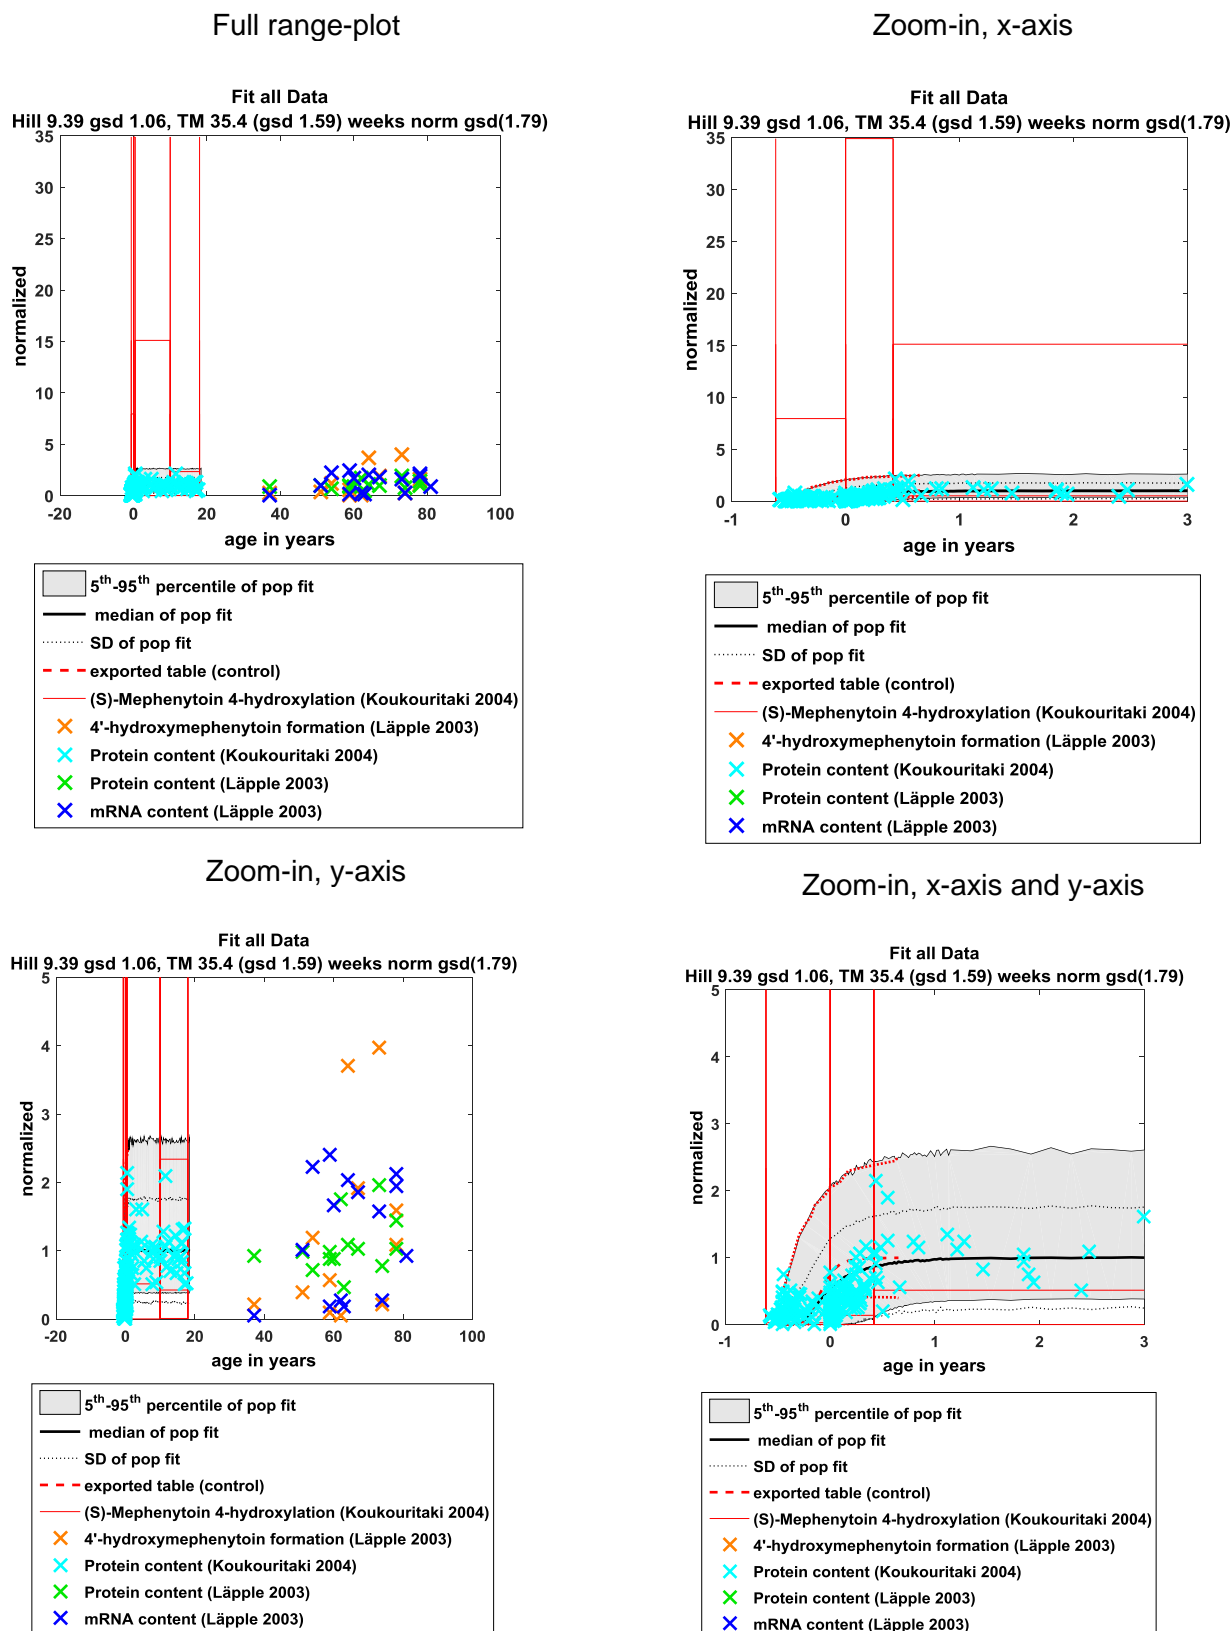

### A.3 CYP2C19 in liver

#### A.3.1 Original data

Reference	Used for fit
<p>J Pharmacol Exp Ther. 2004 Mar;308(3):965-74. Epub 2003 Nov 21.; Developmental expression of human hepatic CYP2C9 and CYP2C19.; Koukouritaki SB, Manro JR, Marsh SA, Stevens JC, Rettie AE, McCarver DG, Hines RN.</p> <p>Digital Object Identifier (DOI): 10.1124/jpet.103.060137</p> <p>→ Figure 3 (protein content) → Table 2 ((S)-Mephenytoin 4-hydroxylation)</p>	<p>Yes Yes</p>
<p>Pharmacogenetics. 2003 Sep;13(9):565-75.; Differential expression and function of CYP2C isoforms in human intestine and liver.; Läpple F, von Richter O, Fromm MF, Richter T, Thon KP, Wisser H, Griesse EU, Eichelbaum M, Kivistö KT.</p> <p>Digital Object Identifier (DOI): 10.1097/01.fpc.0000054122.14659.1e</p> <p>Pubmed ID (PMID): 12972955 (DOI not functioning)</p> <p>→ Table 3 (mRNA expression) → Table 6 (protein content)</p>	<p>Yes Yes</p>

## A.3.2 Fit results

### A.3.2.1 Figure

Comment:

For the intestine, the geometric standard deviation in activity observed in adults ('GeoSD adult') has been separately fitted and implemented with a GeoSD of 2.883.

### A.3.2.2 Fit function

$$A = PMA^n / (A_{0.5}^n + PMA^n)$$

With:

PMA = Post-menstrual age in weeks

A = Activity at PMA

A<sub>0.5</sub> = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

GeoSD adult = geometric standard deviation in activity observed in adults

#### Fit Result:

n = 9.390

A<sub>0.5</sub> = 35.447

GeoSD n = 1.055

GeoSD A<sub>0.5</sub> = 1.592

GeoSD adult = 1.793

### A.3.2.3 Description for PK-Sim®

Values for CYP2C1\* ontogeny are based on information to age dependency of mRNA expression, protein content and (S)-Mephenytoin 4-hydroxylation derived from the papers as mentioned in table A.3.1.

### A.3.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for CYP2C19	Standard Deviation
0.33	0.001	46.35
0.47	0.03	10.04
0.53	0.09	5.56
0.58	0.18	3.76
0.62	0.3	2.96
0.72	0.64	1.96
0.77	0.76	1.84
0.81	0.83	1.75
0.87	0.91	1.68
0.94	0.95	1.71
1.09	0.99	1.69
1.39	1	1.72
1.42	1	1.75

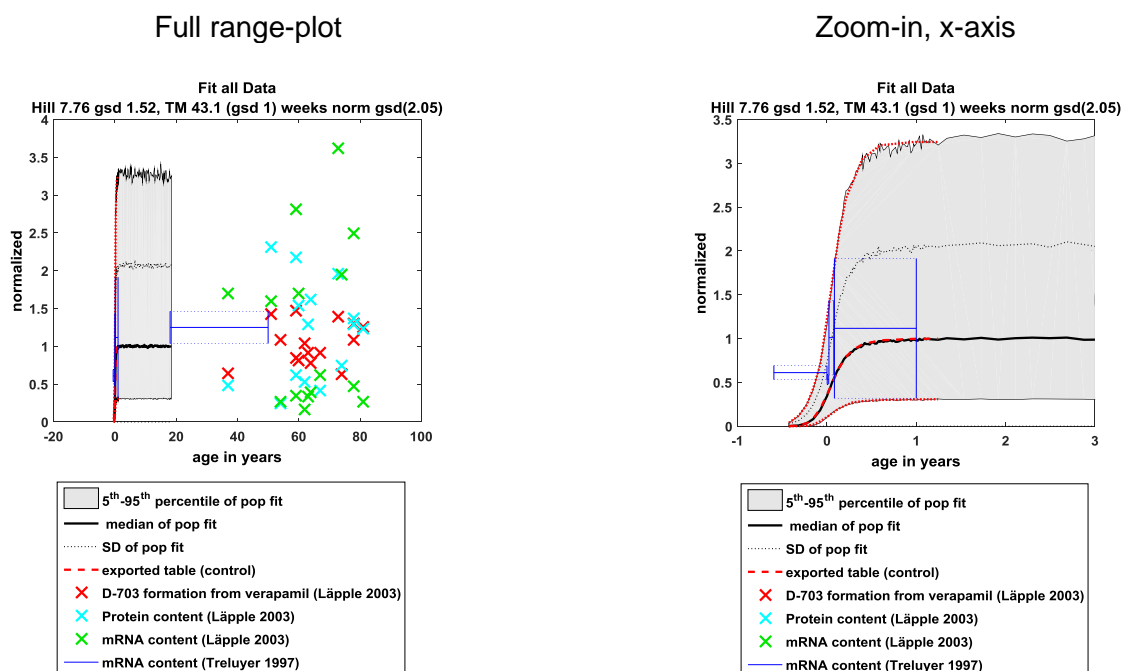

## A.4 CYP2C8 in liver

### A.4.1 Original data

Reference	Used for fit
<p>Pharmacogenetics. 1997 Dec;7(6):441-52.; Developmental expression of CYP2C and CYP2C-dependent activities in the human liver: in-vivo/in-vitro correlation and inducibility.; Treluyer JM, Gueret G, Cheron G, Sonnier M, Cresteil T.</p> <p>Pubmed ID (PMID): 9429229 (DOI not available)</p> <p>→ Figure 5 (mRNA expression)</p>	Yes
<p>Pharmacogenetics. 2003 Sep;13(9):565-75.; Differential expression and function of CYP2C isoforms in human intestine and liver.; Läpple F, von Richter O, Fromm MF, Richter T, Thon KP, Wisser H, Griesse EU, Eichelbaum M, Kivistö KT.</p> <p>Digital Object Identifier (DOI): 10.1097/01.fpc.0000054122.14659.1e</p> <p>Pubmed ID (PMID): 12972955 (DOI not functioning)</p> <p>→Table 3 (mRNA expression)</p> <p>→Table 4(protein content, D-703 formation from verapamil)</p>	Yes Yes

### A.4.2 Fit results

#### A.4.2.1 Figure

#### Comment:

For the intestine, the geometric standard deviation in activity observed in adults ('GeoSD adult') has been separately fitted and implemented with a GeoSD of 2.903

#### A.4.2.2 Fit function

$$A = \text{PMA}^n / (A_{0.5}^n + \text{PMA}^n)$$

With:

PMA = Post-menstrual age in weeks

A = Activity at PMA

$A_{0.5}$  = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

GeoSD adult = geometric standard deviation in activity observed in adults

##### Fit Result:

n = 7.758

$A_{0.5}$  = 43.084

GeoSD n = 1.522

GeoSD  $A_{0.5}$  = 1.000

GeoSD adult = 2.054

#### A.4.2.3 Description for PK-Sim®

Values for CYP2C8 ontogeny are based on information to age dependency of mRNA expression, protein content and D-703 formation from verapamil, derived from the papers as mentioned in table A.4.1.

#### A.4.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for CYP2C8	Standard Deviation
0.34	0.001	9.23
0.45	0.0087	4.92
0.54	0.035	3.23
0.61	0.089	2.62

## A.8.2 Fit results

### A.8.2.1 Figure

#### Comment:

The old PK-Sim® version was not fitted using the Hill equation but using spline functions allowing for the 'overshoot' of relative expression compared to adults. According to Edginton et al. 2006 an ontogeny factor of 1.3 was found for children from 1-3 y.

Reassessing in the light of additional data, the references quoted by Edginton et al 2006, such a high expression value for this age range could not be confirmed. The only CYP-mediated process found to yield an ontogeny factor of approx. 1.44 for children aged 3-12 months was reported by Treluyer et al. 1997 for the hydroxylation of diazepam (Fig. 4B). This metabolism, however, is not specific for CYP3A4 but is also mediated by CYP2C19 as reported by Riss et al. 2008 (Acta Neurol Scand. 118(2):69-86). Therefore, the age-dependency of this process was not considered for fitting CYP3A4 ontogeny in liver. Nevertheless, even if this dataset would have been considered, due to the different fit function the new ontogeny profile of CYP3A4 in liver would be significantly different than the old one.

### A.8.2.2 Fit function

$$A = \text{PMA}^n / (A_{0.5}^n + \text{PMA}^n)$$

With:

PMA = Post-menstrual age in weeks

A = Activity at PMA

$A_{0.5}$  = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

GeoSD adult = geometric standard deviation in activity observed in adults

#### Fit Result:

n = 3.331  
 $A_{0.5}$  = 73.019

GeoSD n = 1.255  
 GeoSD  $A_{0.5}$  = 1.345  
 GeoSD adult = 1.182

### A.8.2.3 Description for PK-Sim®

Values for CYP3A4 ontogeny in liver are based on information to age dependency of mRNA content, testosterone 6 beta hydroxylation activity, protein content as well as amprenavir metabolite formation, derived from the papers as mentioned in table A.8.1.

### A.8.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for CYP3A4	Standard Deviation
0.18	0.001	4.63
0.37	0.011	3.22
0.5	0.03	2.73
0.63	0.064	2.46

## A.9 CYP3A5 in liver

### A.9.1 Original data

Reference	Used for fit
J Pharmacol Exp Ther. 2003 Nov;307(2):573-82. Epub 2003 Sep 15.; Developmental expression of the major human hepatic CYP3A enzymes.; Stevens JC, Hines RN, Gu C, Koukouritaki SB, Manro JR, Tandler PJ, Zaya MJ.  Digital Object Identifier (DOI): 10.1124/jpet.103.054841  → Figure 2 (protein content)	yes → Although, no ontogeny visible for this protein.

### A.9.2 Fit results

#### A.9.2.1 Figure

#### Comment:

Due to the variability of the data, no ontogeny fit for CYP3A5 is possible. The ontogeny function for this enzyme therefore is equal to one for all age groups.

#### A.9.2.2 Fit function

The ontogeny is equal to 1 for all ages. The geometric standard deviation in activity observed in adults is 2.246.

#### A.9.2.3 Description for PK-Sim®

CYP3A5 activity in liver is assumed to be at 100 % adult activity at all ages based on the data from Stevens et al. 2003 J Pharmacol Exp Ther 307(2):573-82.

#### A.9.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for CYP3A5	Standard Deviation
0	1	2.25
0.77	1	2.25

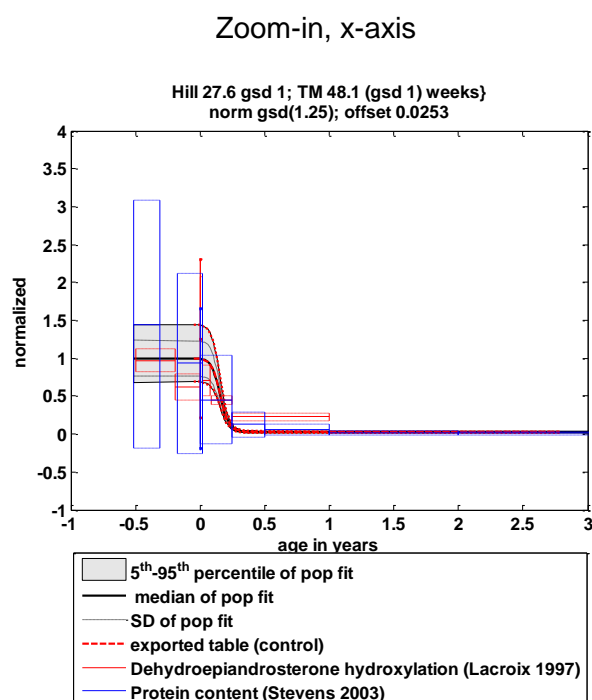

## CYP3A7 in liver

### A.9.3 Original data

Reference	Used for fit
<p>Eur J Biochem. 1997 Jul 15;247(2):625-34.; Expression of CYP3A in the human liver--evidence that the shift between CYP3A7 and CYP3A4 occurs immediately after birth.; Lacroix D, Sonnier M, Moncion A, Cheron G, Cresteil T.</p> <p>Digital Object Identifier (DOI): 10.1111/j.1432-1033.1997.00625.x</p> <p>→ Figure 4A-B (Dehydroepiandrosterone hydroxylation)</p>	Yes

## A.2 UGT1A4 in liver

### A.2.1 Original data

Reference	Used for fit
Drug Metab Dispos. 2007 Sep;35(9):1587-92. Epub 2007 Jun 7.; Pediatric development of glucuronidation: the ontogeny of hepatic UGT1A4.; Miyagi SJ, Collier AC.  Digital Object Identifier (DOI): 10.1124/dmd.107.015214  → Figure 3A (Trifluoperazine glucuronidation)	Yes → although no ontogeny visible for this protein

### A.2.2 Fit results

#### A.2.2.1 Figure

#### Comment:

Due to the variability of the data, no ontogeny fit using the Hill equation for UGT1A4 is possible. The ontogeny function for this enzyme therefore is equal to one for all age groups.

The curve shown in Miyagi et al. 2007 is a result of modeling hepatic UGT1A4 liver clearance assuming a constant rate of development. It therefore does not represent a true fit.

#### A.2.2.2 Fit function

The ontogeny is equal to 1 for all ages. The geometric standard deviation in activity observed in adults is 1.506.

#### A.2.2.3 Description for PK-Sim®

UGT1A4 activity in liver is assumed to be at 100 % adult activity at all ages based on the data from Miyagi 2007 Drug Metab Dispos 35(9):1587-1592.

#### A.2.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for UGT1A4	Standard Deviation
0	1	1.51
0.77	1	1.51

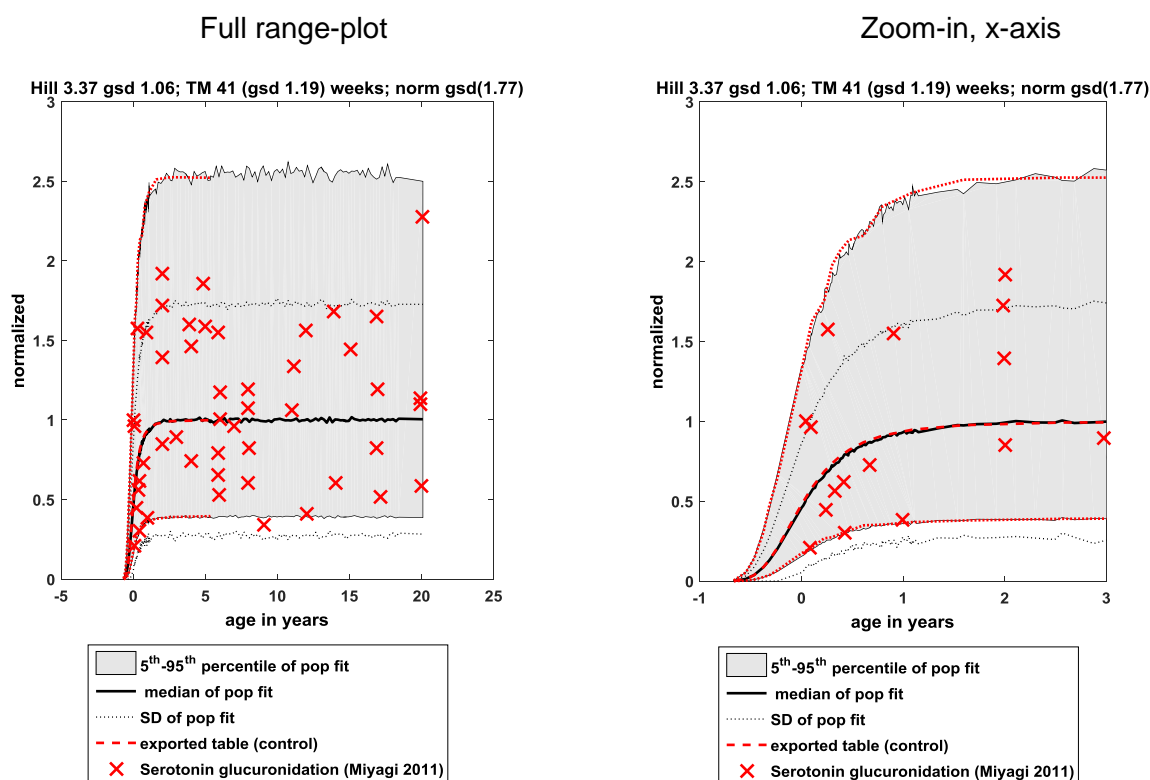

## A.3 UGT1A6 in liver

### A.3.1 Original data

Reference	Used for fit
Drug Metab Dispos. 2011 May;39(5):912-9. doi: 10.1124/dmd.110.037192. Epub 2011 Jan 25.; The development of UDP-glucuronosyltransferases 1A1 and 1A6 in the pediatric liver.; Miyagi SJ, Collier AC.  Digital Object Identifier (DOI): 10.1124/dmd.110.037192  → Figure 2A (Serotonin glucuronidation)	Yes

### A.3.2 Fit results

#### A.3.2.1 Figure

#### Comment:

The old PK-Sim fit was based on in vivo data of paracetamol glucuronidation, i.e. paracetamol glucuronide to sulfate ratios (Edginton et al. 2006). The fit using in vitro serotonin glucuronidation data, however, shows a similar representation of UGT1A6 ontogeny.

#### A.3.2.2 Fit function

$$A = \text{PMA}^n / (A_{0.5}^n + \text{PMA}^n)$$

With:

PK-Sim® Ontogeny Database  
Version 7.1

#### Fit Result:

n = 3.369  
A<sub>0.5</sub> = 41.030

GeoSD n = 1.064  
GeoSD A<sub>0.5</sub> = 1.192  
GeoSD adult = 1.769

PMA = Post-menstrual age in weeks

A = Activity at PMA

A<sub>0.5</sub> = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

GeoSD adult = geometric standard deviation in activity observed in adults

### A.3.2.3 Description for PK-Sim®

Values for UGT1A6 ontogeny are based on information to age dependency of serotonin glucuronidation as reported by Miyagi 2011 Drug Metab Dispos 39(5): 912-919.

### A.3.2.4 PK-Sim® Table

## A.6 UGT2B7 in liver

### A.6.1 Original data

Reference	Used for fit
<p>Gut. 2002 Feb;50(2):259-65.; Developmental aspects of human hepatic drug glucuronidation in young children and adults.; Strassburg CP, Strassburg A, Kneip S, Barut A, Tukey RH, Rodeck B, Manns MP.</p> <p>Digital Object Identifier (DOI): 10.1136/gut.50.2.259</p> <p>→ Figure 2 (mRNA expression)</p>	No
<p>Drug Metab Dispos. 2006 Dec;34(12):2097-101.; Epub 2006 Sep 19. Epirubicin glucuronidation and UGT2B7 developmental expression.; Zaya MJ1, Hines RN, Stevens JC.</p> <p>Digital Object Identifier (DOI): 10.1124/dmd.106.011387</p> <p>→ Figure 6 A (Epirubicin glucuronidation)</p>	Yes
<p>Eur J Clin Pharmacol. 1982;22(6):553-8.; Morphine glucuronidation in human fetal and adult liver.; Pacifici GM, Säwe J, Kager L, Rane A.</p> <p>Digital Object Identifier (DOI): 10.1007/BF00609630</p> <p>→ Figure 2 (Morphine glucuronidation)</p>	Yes
<p>Am J Dis Child. 1992 Aug;146(8):972-6.; The maturation of morphine clearance and metabolism.; McRorie TI, Lynn AM, Nespeca MK, Opheim KE, Slattery JT.</p> <p>Digital Object Identifier (DOI): 10.1001/archpedi.1992.02160200094036</p> <p>→ Figure 2 (Morphine glucuronide clearance)</p>	Yes
<p>Clin Pharmacokinet. 2006;45(10):1013-34.; Development and evaluation of a generic physiologically based pharmacokinetic model for children.; Edginton AN, Schmitt W, Willmann S.</p> <p>Digital Object Identifier (DOI): 10.2165/00003088-200645100-00005</p> <p>→ Table 3 (Lorazepam and morphine clearance)</p>	Yes

## A.6.2 Fit results

### A.6.2.1 Figure

### A.6.2.2 Fit function

$$A = PMA^n / (A_{0.5}^n + PMA^n)$$

With:

PMA = Post-menstrual age in weeks

A = Activity at PMA

$A_{0.5}$  = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

GeoSD adult = geometric standard deviation in activity observed in adults

#### Fit Result:

n = 6.543

$A_{0.5}$  = 72.533

GeoSD n = 1.023

GeoSD  $A_{0.5}$  = 1.554

GeoSD adult = 1.595

### A.6.2.3 Description for PK-Sim®

Values for UGT2B7 ontogeny are based on information to age dependency morphine glucuronidation activity, epirubicin glucuronidation activity, as well as in vivo morphine and lorazepam glucuronide clearance, derived from the papers as mentioned in table A.6.1.

### A.6.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for UGT2B7	Standard Deviation
0.479999989	0.00099	17.12999916
0.660000026	0.0073	12.78999996

## 4.5 CYP Enzymes in the intestine

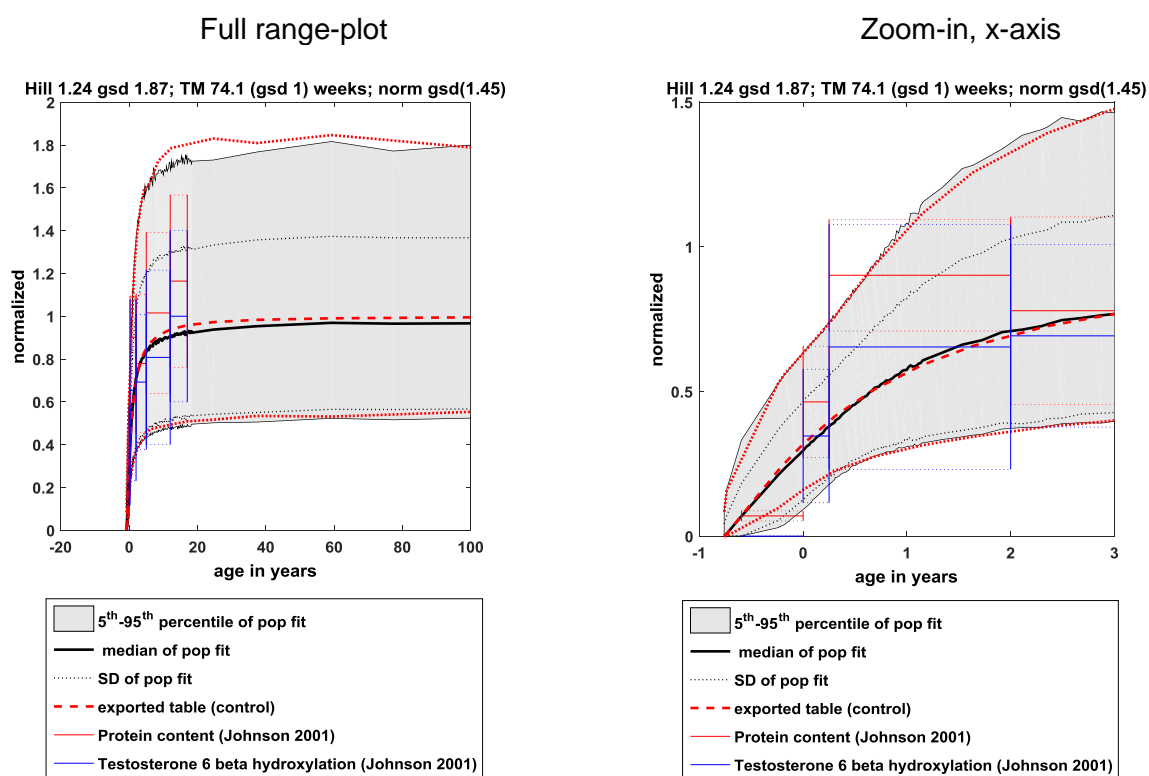

### A.1 CYP3A4 in duodenum

#### A.1.1 Original data

Reference	Used for fit
Br J Clin Pharmacol. 2001 May;51(5):451-60.; Enterocytic CYP3A4 in a paediatric population: developmental changes and the effect of coeliac disease and cystic fibrosis.; Johnson TN, Tanner MS, Taylor CJ, Tucker GT.  Digital Object Identifier (DOI): 10.1046/j.1365-2125.2001.01370.x  → Figure 2 (Protein content and Testosterone 6 beta hydroxylation)	Yes

#### A.1.2 Fit results

##### A.1.2.1 Figure

##### A.1.2.2 Fit function

$$A = \text{PMA}^n / (A_{0.5}^n + \text{PMA}^n)$$

With:

PMA = Post-menstrual age in weeks

A = Activity at PMA

$A_{0.5}$  = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

##### Fit Result:

$$n = 1.237$$
$$A_{0.5} = 74.055$$

$$\text{GeoSD } n = 1.872$$

$$\text{GeoSD } A_{0.5} = 1.000$$

$$\text{GeoSD adult} = 1.451$$

GeoSD adult = geometric standard deviation in activity observed in adults

#### A.1.2.3 Description for PK-Sim®

Values for CYP3A4 ontogeny in intestine are based on information to age dependency of protein content and testosterone 6 beta hydroxylation activity as described by Johnson et al. 2001 Br J Clin Pharmacol. 51(5):451-60.

#### A.1.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for CYP3A4	Standard Deviation
0.01	0.0011	13.99
0.03	0.0086	5.87
0.53	0.23	1.67
0.59	0.25	1.63
0.77	0.32	1.52
1.08	0.41	1.45
1.44	0.5	1.45
1.92	0.59	1.47
2.41	0.66	1.48
3.13	0.73	1.49
3.97	0.78	1.49
5.17	0.83	1.49
6.87	0.87	1.46
9.29	0.91	1.47
13.18	0.94	1.48
17.8	0.96	1.47
25.51	0.97	1.47
38.25	0.98	1.45
60.21	0.99	1.46
101.04	1	1.43

## 4.6 Plasma Proteins

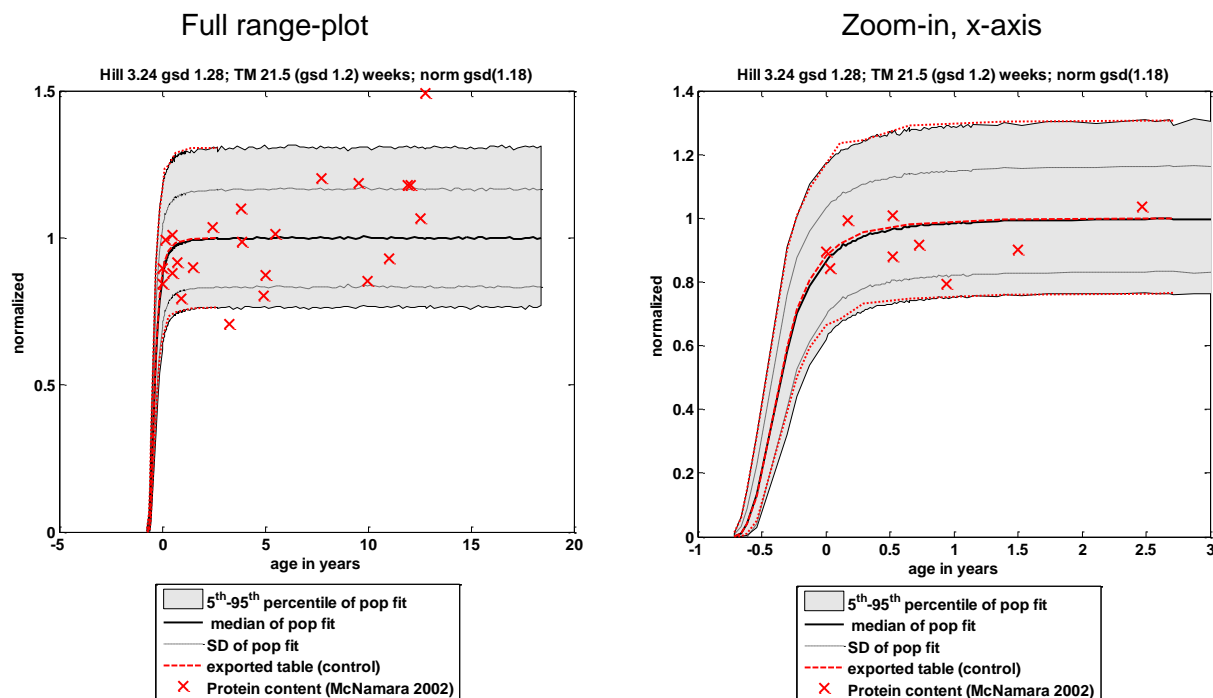

### A.1 Human Serum albumin (HSA)

#### A.1.1 Original data

Reference	Used for fit
AAPS PharmSci. 2002;4(1):E4.; Protein binding predictions in infants.; McNamara PJ1, Alcorn J.  Digital Object Identifier (DOI): 10.1208/ps040104  → Figure 1 (serum protein concentrations)	Yes

#### A.1.2 Fit results

##### A.1.2.1 Figure

##### A.1.2.2 Fit function

$$A = \text{PMA}^n / (A_{0.5}^n + \text{PMA}^n)$$

With:

PMA = Post-menstrual age in weeks

A = Activity at PMA

A<sub>0.5</sub> = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

##### Fit Result:

n = 3.240

A<sub>0.5</sub> = 21.533

GeoSD n = 1.284

GeoSD A<sub>0.5</sub> = 1.205

GeoSD adult = 1.177

GeoSD adult = geometric standard deviation in activity observed in adults

#### A.1.2.3 Description for PK-Sim®

Values for Human Serum albumin ontogeny are based on information to age dependency of serum albumin concentrations, as reported by McNamara et al., AAPS PharmSci. 2002;4(1):E4.

#### A.1.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for HSA	Standard Deviation
0.05	0.0011	4.46
0.1	0.011	2.8
0.16	0.04	2.2
0.23	0.13	1.74
0.46	0.59	1.29
0.55	0.71	1.24
0.64	0.81	1.2
0.77	0.88	1.19
0.88	0.92	1.2
1.06	0.96	1.17
1.42	0.98	1.18
2.17	1	1.18

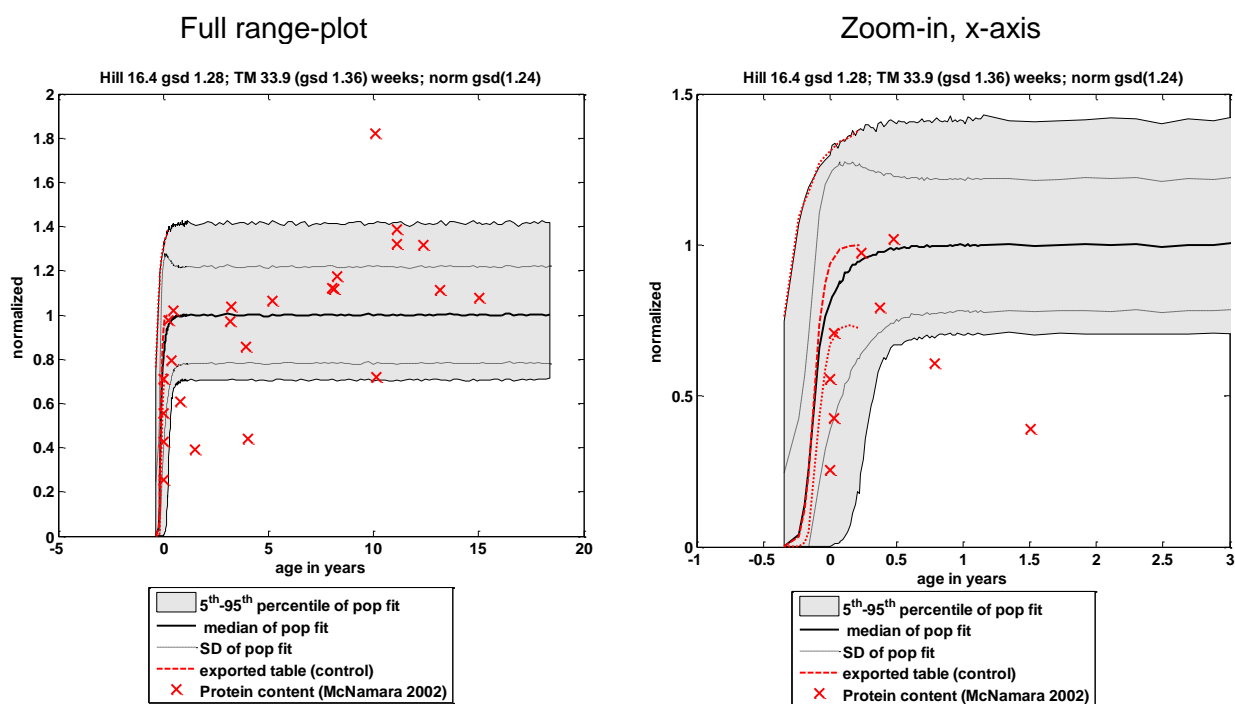

## A.2 Alpha-1-acid glycoprotein (AAG)

### A.2.1 Original data

Reference	Used for fit
AAPS PharmSci. 2002;4(1):E4.; Protein binding predictions in infants.; McNamara PJ1, Alcorn J.  Digital Object Identifier (DOI): 10.1208/ps040104  → Figure 1 (AAG)	Yes

### A.2.2 Fit results

#### A.2.2.1 Figure

#### A.2.2.2 Fit function

$$A = \text{PMA}^n / (A_{0.5}^n + \text{PMA}^n)$$

With:

PMA = Post-menstrual age in weeks

A = Activity at PMA

A<sub>0.5</sub> = PMA at 50 % activity compared to adult

n = Hill coefficient

GeoSD = geometric standard deviation

GeoSD adult = geometric standard deviation in activity observed in adults

#### Fit Result:

n = 16.441

A<sub>0.5</sub> = 33.898

GeoSD n = 1.284

GeoSD A<sub>0.5</sub> = 1.358

GeoSD adult = 1.235

#### A.2.2.3 Description for PK-Sim®

Values for A.2 Alpha-1-acid glycoprotein ontogeny are based on information to age dependency of serum Alpha-1-acid glycoprotein concentrations, as reported by McNamara et al., AAPS PharmSci. 2002;4(1):E4.

#### A.2.2.4 PK-Sim® Table

Post menstrual age [year(s)]	Ontogeny for AAG	Standard Deviation
0.43	0.001	55.73
0.53	0.035	8.11
0.58	0.12	3.86
0.61	0.24	2.63
0.69	0.74	1.39
0.73	0.87	1.27
0.77	0.94	1.23
0.84	0.99	1.21
0.92	1	1.21
